---

We have access to only 16 lots out of 60. All 16 have been sampled to date. Results for 8 are back (XRF only – still waiting lab data). 7 of 8 are over the RML for lead and/or arsenic in at least 1 area on the property.

I have emails and letters out to about 20 additional property owners, but have not received a response.

Additionally, slag is observed at areas outside the study area. It's actually quite easy to find in nearby road cuts or slopes on a roadside, indicating an expansion of the sampling is probably warranted.

Chuck,

Can you provide me an update of the ongoing work at Elm Street?
